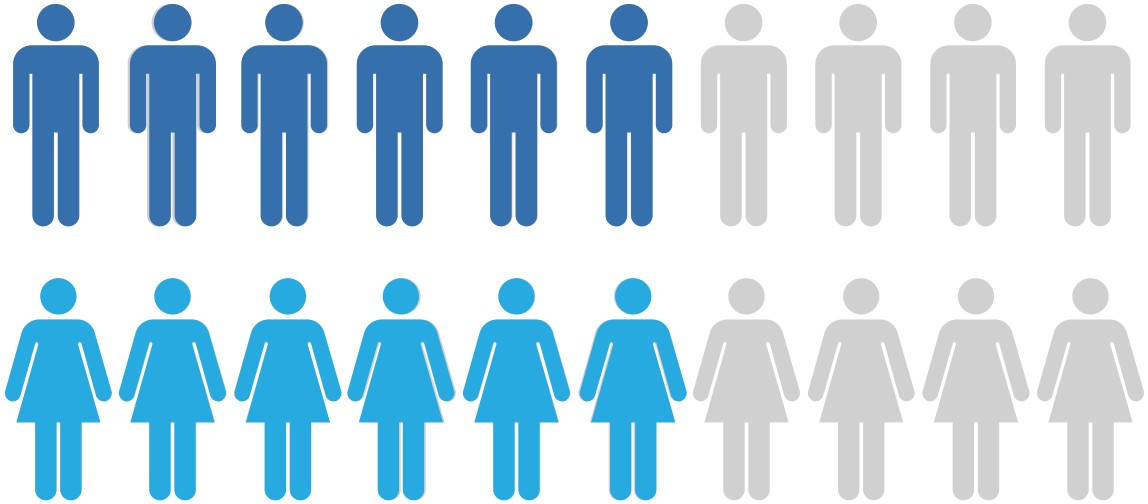
SLIDEHEROES

Visual Perception and Communication

VISUAL-SPATIAL THINKING VERSUS AUDITORY-SEQUENTIAL THINKING

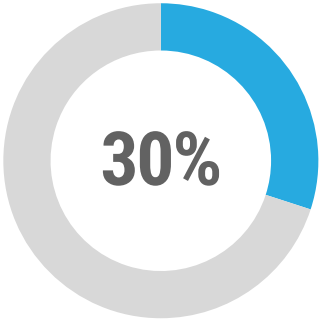
VISUAL THINKING IS COMMON



6/10

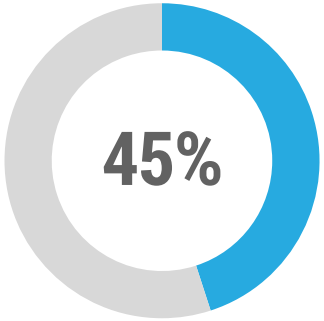
Visual thinking is common in approximately 60%–65% of the population

DIFFERENT PEOPLE THINK DIFFERENTLY



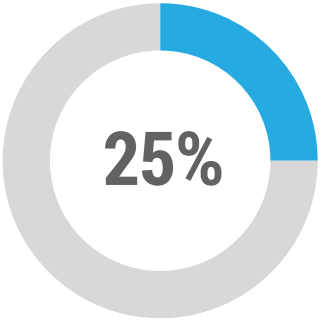
STRONG VISUAL / SPATIAL

30% of the population strongly uses visual/spatial thinking



BOTH

45% uses both visual/spatial thinking and thinking in the form of words



EXCLUSIVELY WORDS

25% think exclusively in words

Child development theorist Linda Kreger Silverman

DIFFERENT APPROACHES TO PROCESSING IDEAS

VISUAL-SPATIAL THINKERS

- Think primarily in pictures
- Have visual strengths
- Relate well to space
- Learn concepts all at once
- Learn best by seeing relationships

AUDITORY-SEQUENTIAL THINKERS

Linda Kreger Silverman

DIFFERENT APPROACHES TO PROCESSING IDEAS

VISUAL-SPATIAL THINKERS

- Think primarily in pictures
- Have visual strengths
- Relate well to space
- Learn concepts all at once
- Learn best by seeing relationships

AUDITORY-SEQUENTIAL THINKERS

Linda Kreger Silverman

DIFFERENT APPROACHES TO PROCESSING IDEAS

VISUAL-SPATIAL THINKERS

- Think primarily in pictures
- Have visual strengths
- Relate well to space
- Learn concepts all at once
- Learn best by seeing relationships

AUDITORY-SEQUENTIAL THINKERS

- Think primarily in words
- Are step-by-step learners
- Are analytical thinkers
- Attend well to details

Linda Kreger Silverman

GOLDEN RULE

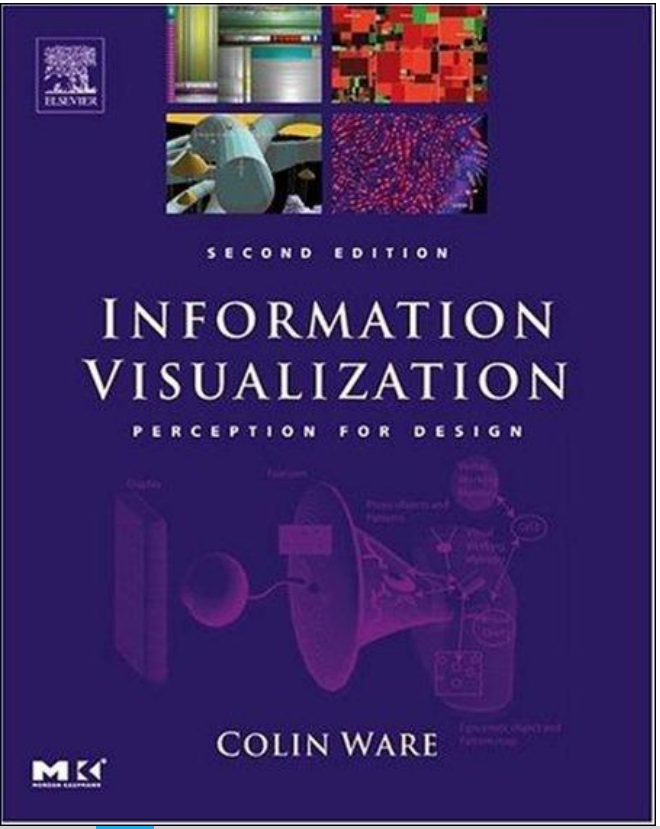
MAKE USE OF WORDS & GRAPHICS

Our presentations must use a combination of words and graphics to communicate our messages in order to reach people with all types of learning preferences

Visual Perception and Communication

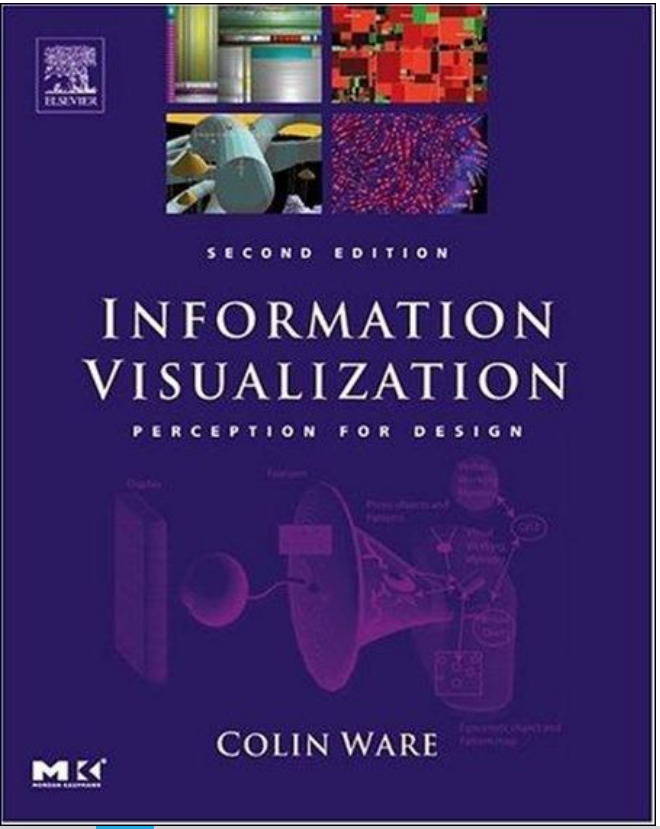
VISUAL PERCEPTION AND INFORMATION PROCESSING

WHY DATA VISUALIZATION?



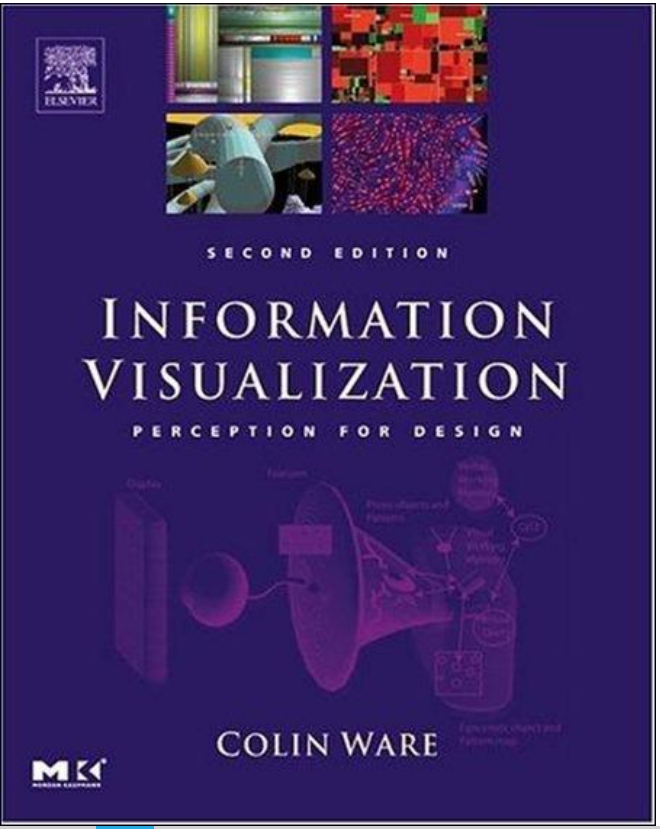
> Why should we be interested in data visualization?

WHY DATA VISUALIZATION?



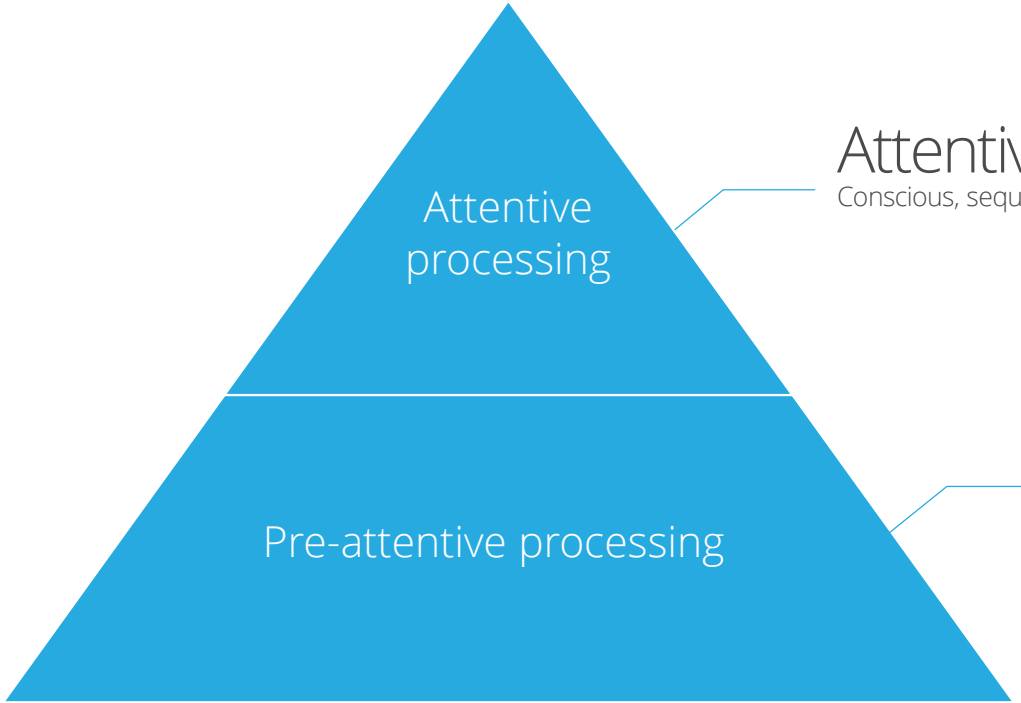
> Why should we be interested in data visualization?
>
> The visual system has its own rules. We can see patterns presented in certain ways, but if they are presented in other ways, they become invisible.

WHY DATA VISUALIZATION?



> Why should we be interested in data visualization?
>
> The visual system has its own rules. We can see patterns presented in certain ways, but if they are presented in other ways, they become invisible.
>
> When data is presented in certain ways the patterns can be readily perceived.

ATTENTIVE AND PRE-ATTENTIVE PROCESSING



Attentive processing

Conscious, sequential, and slow / hard

Pre-attentive processing

Below the level of consciousness, very rapid, tuned to specific sets of visual attributes

VISUAL ATTRIBUTE TRIGGERS

TRIGGERS OF PRE-ATTENTIVE PROCESSING

	ATTRIBUTE	QUANTITATIVELY PERCEIVED?
Form	Length	Yes
	Width	Yes, but limited
	Orientation	No
	Shape	Yes, but limited
	Size	No
	Enclosure	No
Color	Hue	No
	Intensity	Yes, but limited
Spatial positioning	2-D position	Yes

VISUAL ATTRIBUTE TRIGGERS IN PRACTICE

2014 Content Marketing Strategy: Invest in evergreen / Big Content, including mini-sites, videos, interactive infographics and other show-stoppers; Combine our content marketing with SEO by isolating the keywords that are driving the most traffic and building content around them; Create stories people want to read; Connect data with content in innovative and meaningful ways; Answer our prospects' top 30 questions

Visual Perception and Communication

CREATING EFFECTIVE GRAPHICS & VISUALS

LESSON SUMMARY

ADAPT TO LEARNING STYLES

People prefer to learn in different ways. 30% of the population are strongly oriented towards visual-thinking. 25% think nearly exclusively in words.

USE WORDS & VISUALS

To appeal to these groups our presentations must utilize both words and visuals

APPEAL TO THE UNCONSCIOUS MIND

Use visual attributes to trigger pre-attentive processing

INVEST THE TIME

Effective graphics and visuals take time to develop – take the time to invest in them
